

PRO ASSEMBLY COMPOUND

Product Information Sheet

Product Name: Pro Assembly Compound

710 OIL Pro Assembly Compound is a lubricant specially designed for use when assembling race and high performance engines and transmissions to reduce wear at initial start up.

Also it's outstanding anti-corrosion properties combined with it's ability to cling to metal surfaces without significant drain-off means that it is ideal for all precision assemblies which could remain in storage for long periods before use.

Benefits

- A thin film of 710 Pro Assembly Compound adheres strongly to separate bearing surfaces prolonging component life.
- Prevents premature wear during start up so protecting parts during running in.
- Outstanding anti-corrosion properties
- Does not contain solids.

Method of Application

Apply directly to bearing surfaces direct from the bottle.

Typical Physical Characteristics

Apperance Blue/Green
Viscosity (Kinematic) at 100°C 37.22 cSt
Density at 20°C 0.89g/cm³

Developed, and Manufactured for 710 OIL, by Fuchs Lubricants (UK) plc in the UK.
